Summary

Software & Flutter developer with 5+ years building production mobile apps, alongside strong frontend experience crafting responsive web platforms using React.js and modern JS/TS ecosystems. I leverage React.js for building scalable UI dashboards, integrating REST APIs, and managing complex web application states. Combined with 14 years of field engineering in large-scale telecoms, I think about reliability and latency in a way most developers do not. I wrote my first Flutter app for an Irish startup in 2020 and have been shipping production features ever since — real-time chat, maps, Firebase integrations, and BLoC state management. Currently enrolled in the DEPI Agentic AI Engineer track while building MedAgent, an AI-assisted health tool, deepening hands-on knowledge of LLM integrations, RAG, external APIs, Vite.js, Flutter, and CI/CD pipelines.

Work

Flutter App Developer

May 2023 - Dec 2024

InnitZone, LLC | USA (Remote)

- Built a Muslim lifestyle tracker app “FlairUp app” — daily prayer reminders, habit planning, and Quran progress tracking — using Flutter with BLoC state management.
- Implemented local notification scheduling for prayer times, handling timezone edge cases and background execution on both iOS and Android.
- Designed and built the habit/plan tracking module with persistent local storage using Hive, keeping the app functional fully offline.
- Worked async with a remote team; contributed to code reviews and bi-weekly release cycles throughout the engagement.

Flutter Mobile Developer

Jul 2020 - Dec 2022

Stormra Ltd | Dublin, Ireland (Remote)

- Core Flutter developer on Habibi (habibiapp.io), a Muslim matrimonial app — matchmaking with profile filtering, real-time chat, and location-aware search.
- Owned the authentication module — login, registration, profile setup flow, and token refresh — integrated against a Node.js backend.

- Built the real-time chat feature using Firebase Firestore; handled message delivery states, read receipts, and push notifications.
- Implemented location-based match discovery using Google Maps APIs, including distance filtering and map view for nearby profiles.
- Applied BLoC architecture across the app and set up the pattern conventions the rest of the team followed.
- Shipped Firebase Analytics to track key funnels: registration completion, match interactions, and chat engagement.

Rollout & Acceptance Supervisor

Jul 2022 - Present

WE - Telecom Egypt | Cairo, Egypt

- Responsible for end-to-end delivery of network sites across Giza — from contractor handover to on-air sign-off.
- Ran weekly acceptance tracking across multiple sites in parallel; escalated blockers across RF, TX, Core, and Power teams.
- Point of contact for technical issues that could not be resolved at field level.

Rollout Project Engineer

Jan 2018 - Jun 2022

Orange Egypt | Cairo, Egypt

- Delivered 500+ network sites across Cairo; managed timelines, vendor coordination, and quality sign-off.
- Led DAS deployment at Cairo International Stadium — one of the more complex indoor RF projects I have handled.
- Served as PM for high-profile events including AFCON 2019 and ICT 2018/2019; on-call for VIP escalations.

Rollout Project Engineer - 3G Overlay & New Sectors

May 2015 - Jan 2018

Orange Egypt | Cairo, Egypt

- Executed 3G radio rollout across roads, microcells, and indoor sites to improve coverage and capacity.
- Coordinated RET and MHA projects to optimize radio performance and network efficiency.
- Participated in LTE trial projects, supporting testing, optimization, and initial deployment.

Project Coordinator - SRAN & E-Band Rollout

Nov 2011 - Apr 2015

LCC (A Tech Mahindra Company) | Cairo, Egypt

- Coordinated Etisalat SRAN and E-Band rollout with a 5-person engineering team; handled scheduling and weekly reporting.
- Main liaison between Huawei technical teams and the client — translated specs into field tasks.
- Supported project financials through cost calculations and net revenue analysis.

Project

2025 - Present

MedAgent

AI-powered medical assistant built on React/Vite, deployed on Vercel.as a test for now Hooks into LLM APIs to help users work through medical queries.

- Phase 1 (live): AI-powered medical assistant built on React/Vite, deployed on Vercel.as a test for now Hooks into LLM APIs to help users work through medical queries.
- Phase 2 (in progress): cross platform Flutter app for iOS and Android — proper Flutter UI, push notifications, and offline-first data handling.

2023 - 2024

FlairUp app

Flutter lifestyle app for Muslim users — prayer reminders, Quran tracking, and daily habit planning. Fully offline-capable using Hive local storage with background notification scheduling on iOS and Android.

- Flutter lifestyle app for Muslim users — prayer reminders, Quran tracking, and daily habit planning.
- Fully offline-capable using Hive local storage with background notification scheduling on iOS and Android.

2020 - 2022

Habibi App

Muslim matrimonial Flutter app with real-time chat, profile matchmaking, and location-based discovery. Built for a live user base with full Firebase integration.

- Muslim matrimonial Flutter app with real-time chat, profile matchmaking, and location-based discovery.
- Built for a live user base with full Firebase integration.

Education

Akhbar El-Yom Academy

Sep 2006 - Jul 2011

B.Sc. Electronics & Communication Engineering

Certificates

Android Developer Track

One Million Arab Coders Initiative

Mobile Application Development: Java SE for Android

Flutter SDK & BLoC Pattern

DevOps fundamentals: Docker, CI/CD, Azure AZ-400

Languages

Arabic (Native), English (C1 Advanced (C2 Listening/Reading))

Skills

Mobile

Flutter, Dart, Android, Java, BLoC, Provider, Firebase, Google Maps API, REST APIs

Backend

.NET Core, Python, RESTful API design, PostgreSQL

DevOps & Cloud

Docker, CI/CD pipelines, Azure DevOps, Git, GitHub Actions

AI & Emerging

Generative & Agentic AI, DEPI track, LangChain, LLM API integration

Architecture

Clean Architecture, MVVM, Agile / Scrum

Tools

VS Code, Android Studio, Postman, Jira, Figma
